FIG. 3 is a gel showing the proteins present at different stages of the process
of the invention.

AB According to the invention, Applicants have identified a clarification
process which is simple and quick and provides a protein isolate of
greater than 90% whey protein which may then optionally be further
purified to select out individual proteins. The process involves a number
of steps, the order of which is critical, and novel lipid removal
techniques to achieving the highly pure and clarified protein isolate of
the invention.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB This invention discloses a method for separating a highly pure form of bovine lactoferrin from cow's milk and purifying same which comprises

preparing an affinity-chromatographic column by fixing a monoclonal antibody against bovine lactoferrin to an insoluble carrier; passing milk or a solution of bovine lactoferrin derived from cow'milk through the affinity-chromatographic column; and then eluting the bovine lactoferrin adsorbed to the affinity-chromatographic column.
